

# Davallia solida fejeensis

dav-VAL-ee-uh SOL-id-uh fee-jee-EN-sis

**Common Names:** Rabbit's Foot Fern, Lacy Paw Plant, Hare's Foot Fern

**Family:** Polypodiaceae

**Origin:** Fiji

**Growth:** Creeping

**Light:** Bright, indirect

**Foot Candles:** 100 - 175

**Water:** Keep evenly moist

**Humidity:** 40% - 75%

**Temperature:** 16°C - 28°C

**Soil:** Regular potting mix

**Container:** Self-watering planter, hanging basket

**Nutrients:** Not required

**Propagation:** Spore, tissue culture, or division of rhizome

**Interiorscape Use:** Personal employee plant, novelty

**Common Pests:** Mealybugs, Aphids, Spider Mites, Thrips.

**Common Issues:** Root rot when sitting in water. Leaves brown when over-watered, leaves droop and drop if under-watered, leaves crisp with too much light.

**Comments:** Unlike most ferns, the Rabbit's Foot Fern is grown because of its creeping rhizome that has a peculiar appearance. Some think it is an adorable rabbits foot peaking over the edge of the pot while others see it as a creepy tarantula leg trying to escape. The fern fronds grow directly from this rhizome. Funnily enough, rabbits are one of the few animals who prefer not to eat the plant.

**Toxicity:** Safe.
