

Clivia miniata

KLIV-ee-ah min-ee-AY-tah

Common Names: Kafir Lily, Clivia Lily, Flame Lily, September Lily

Family: Amaryllidaceae

Origin: South Africa

Growth: Clumping

Light: Bright, indirect

Foot Candles: 150 - 225

Water: Allow to dry partially. Do not water directly onto foliage

Humidity: Not required

Temperature: 14°C - 28°C

Soil: Regular potting mix, prefers to be root-bound

Container: Tight planter with drainage

Nutrients: 10-20-10 Monthly

Propagation: Seed or division

Interiorscape Use: Reception

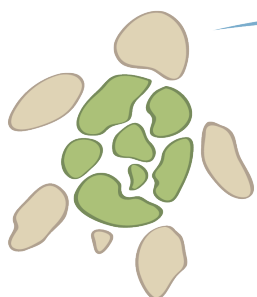

Common Pests: Mealybugs, Aphids, Spider Mites, Scale, Thrips.

Common Issues: Susceptible to mildew when water sits on leaves. Crown may rot if watered directly.

Comments: Requires several years to bloom from seed so it is recommended to start with a mature plant. Keep your plant pot-bound for at least 5 years before repotting, which will encourage more blooms.

Toxicity: Ingesting roots or bulb can cause vomiting, salivation, diarrhea; large ingestions cause convulsions, low blood pressure, tremors, and cardiac arrhythmias.
