

# DO YOU HAVE STRING ALGAE?

Here's a 5-day regiment to quickly battle your string algae problem.

## DAY 1

Turn off pump and wait for water to become still. Apply Slime Away directly to the string algae following the dosage guide on the container. Allow the Slime Away to sit for 15 minutes.

Mix a dose of S.A.B with a bucket of warm (26 C/80 F), detoxified water using the directions on the container to determine the dosage. Pour the mixture around the pond. The pond may become cloudy. Allow the S.A.B. to work for 15 minutes.

Restart the pump.

## DAY 2

Do nothing, allow the water to continue circulating.

## DAY 3

If the amount of string algae has not been significantly reduced, apply Slime Away and S.A.B. again. If the string algae is already fully broken up, apply only S.A.B. in the same manner as Day 1.

## DAY 4

Do nothing, allow the water to continue circulating.

## DAY 5

Apply only the S.A.B. By now there should be a significant reduction in the amount of string algae in the pond. Continue your regular pond maintenance (Maintain for Ponds and Barley Straw Extract).

## PRODUCTS NEEDED FOR REGIMENT:

Slime Away removes string algae from rocks by breaking filaments into single-celled pieces.

**Pond Pro Slime Away**  
**1 kg - \$34.98**

S.A.B (String Algae Buster) breaks down string algae and other pond debris by using bacteria, barley, and concentrated enzymes.

**SAB Stream & Pond Cleaner**  
**1.1 LB - \$47.99**
