

DO YOU HAVE SUSPENDED ALGAE?

Suspended algae are microscopic, free-floating algae that remain dispersed throughout the pond water, often causing green or cloudy water. While they are a natural part of the pond ecosystem, excessive suspended algae can reduce water clarity and affect the health of fish and plants. Therefore, it is important to take the proper steps to prevent excessive growth in your water feature.

Use Maintain for Ponds every day for 2-3 weeks.

Beneficial bacteria maintains a balanced ecosystem and reduces maintenance. Algae cells are broken down and digested by the beneficial bacteria.

Maintain for Ponds
32 oz/946 mL - \$44.99

Use Rapid Clear weekly as directed on the bottle.

Rapid Clear Flocculant clears cloudy pond water fast by clumping debris so it can be easily removed in combination with Fine Filter Pads. It works within 24 hours.

Rapid Clear Flocculant
8 oz/236 mL - \$21.99

Trap suspended algae on Fine Filter Pad in skimmer or wherever sufficient water flow allows & clean pad daily (or several times a day).

Fine Filter Pads help quickly remove fine particles from pond water when used with Rapid Clear Flocculant. Just place it in the skimmer box to improve water clarity.

Rapid Clear Fine Filter Pads
3 x 12" by 24" - \$33.99

Use Nualgi Ponds weekly as directed on the bottle.

Nualgi Ponds safely improves the water quality and restore balance by adding essential nutrients to reduce algae, odours, and maintenance.

Nualgi Ponds
60 mL - \$44.98

Use UltraKlear® UV Clarifiers for a long-term solution.

UltraKlear® UV Clarifier quickly clears green water by using advanced UV technology to eliminate algae blooms. Its efficient design boosts UV performance by up to 50%, and it's easy to install & maintain.
Models: 1000, 2500 & 5000

UltraKlear® UV Clarifiers
\$339.99-\$499.99
